

PAGID RSH

Racing Brake Pads for Historic Cars

RSH 29E

Medium to high friction long distance compound with very good thermal stability in respect to friction, pad wear and disc wear. Low pedal effort, slightly progressive in-stop behavior and good modulation. Excellent pad wear rate under endurance conditions, excellent disc life. Less aggressive than RSH 3 giving best possible brake balance, modulation and consistency of friction.

RSH 42

Low to medium friction compound with immediate low temperature response. Very easy bedding process. Classic rally pad and also very popular in small formula cars.

RSH 3

High friction metal-ceramic type compound, high initial bite and still excellent modulation and release characteristics. Consistently firm pedal at all temperatures, fade resistant up to 800°C, low thermal conductivity.
